

RMCARD205-305 v1.3.4 Release Note

REMOTE MANAGEMENT CARD FIRMWARE RELEASE NOTES

Applicable Products: RMCARD205 / RMCARD305

Version 1.3.4 (Release Date: June 18, 2021)

New Features

- Firmware updates can now be completed via the Web User Interface on the card.
- Adds support for users to enable and disable cipher suites for SSL Server.

Feature Improvements

- Removed TLS V1.1 Protocol from SSL Server to eliminate a security vulnerability.
- Added support for a Save and Restore Configuration function with RADIUS Authentication.
- The “hard reset” function, done by removing a jumper from the reset pins on the card, will now reset the Admin Manager IP when Firmware/Data versions are mismatched.
- The display content has been optimized on the help webpage for a better user experience.

Fixes

- Corrects an issue with logging into the web interface via Safari and Opera web browser.
- Fixes an issue with being able to draw a graph on the data log [Log->Graphing] webpage when the system date format is not set as "mm/dd/yyyy".
- Resolves an issue with being able to configure External Battery Modules (EBM) for the OR2200LCDRTXL2U UPS models.
- Fixes an issue with the Time Zone being incorrectly displayed after using the manual setup in the range of in the Daylight-Saving Time (DST).
- Resolves an issue with special characters not being allowed when setting up a Schedule Name on the Web Interface.
- Corrected an issue with the LDAP/RADIUS Server Configuration intermittently failing when the settings are saved as “Skip Test” on the Web Interface.
